

Multifocal Soft Contact Lenses

What are Multifocal Contact Lenses?

Multifocal soft contact lenses are designed to help people who need reading glasses see clearly at all distances. They contain prescriptions for viewing near, intermediate, and distant objects all within the same lens.

Benefits of Multifocal Contact Lenses

-  See clearly in most scenarios without needing to wear a pair of glasses.
-  Unlike with glasses, you don't have to look through specific areas of the lens to see things at different distances.
-  You can be fit with these lenses even if you've never worn contact lenses in the past.
-  If you don't need glasses for the distance, you can use multifocal lenses instead of reading glasses.
-  They can replace the need for multiple pairs of glasses – no more searching around for the pair you need!
-  They can be used occasionally. Keep your glasses and use contact lenses when exercising or on special occasions.

Options for Multifocal Contact Lenses

Daily Disposables	Reusable
Single use – Discard upon removal.	Clean and store upon removal. Use new lenses after a specified time.
